Operational

In Colombia, at the Anza Project, the Company completed its in-fill drilling program at Pepas and has declared a Maiden Resource Estimate of 219,000 ounces of gold. The Company is now drilling in the greater Pepas area with a view to refining its geological model and identifying potential future deposits. After the period end, the Company announced that it had identified a second area of mineralization some 100 metres to the West of Pepas. In APTA, to the south of the Pepas deposit, in the middle of the Company's licence area, drilling commenced post the period end to gain a better understanding of the geological controls ahead of a potential resource estimate later this year. And, to the south of APTA, geological mapping and sampling has been completed at El Cedro and the Company announced that new mapping and sampling had commenced post the period end at a new second porphyry identified to the south of El Cedro. New airborne geophysics is being flown to establish drilling targets at both El Cedro and in the new second porphyry identified to the south of El Cedro.

In Argentina, the Company's first drilling program for a total of circa 4,400 metres had been completed by the end of March 2026 at the El Pantano project and results are awaited.
